Our Pearly Greeting.

WE WRITE this to say we wish you all a happy new year, and remind you of our Premium American Pansy Seeds and Plants. Our aim is to constantly grade up to higher quality and keep our pansy seed right in the front.

Our success in taking premiums at the leading fairs of the west in the past has been all that could be desired, having never been beaten. We shall probably advertise but little that way in the future, our attention to seed gathering being so much needed in the fall. As in the past the pansy seeds offered for sale by us are all of our own growing, and we offer this year's crop with confidence that they are the best.

We seem to be commencing an era of prosperous times, and shall be prepared to supply the increased demand for plants which better times must bring.

The special lower rates on plants are continued by the express companies and if at any time you are charged as much as on ordinary goods let us know.

Club orders not only give you lower rates for plants but also less rate of express charges for larger quantities.

This catalogue is sent only to customers or on request and we thank our many friends who recommend our seeds and plants to others or who send names of friends who would like to receive our catalogue. We are always pleased to answer questions in regard to culture, but the best medium for such information is through our leading horticultural papers and we especially recommend to our customers the following:

American Gardening, New York city, P. O. Box 1697. Weekly \$1.00 per year.

Gardening, Chicago, Ill., Monon building. Semi-monthly, \$2.00 per year.

Wisconsin Horticulturist, Baraboo, Wis. Monthly, 50 cents per year.

We shall be pleased to order sample copies of any of these publications sent to our customers who wish it.

Baraboo, Wis., January 1, 1898.

How to Grow Pansies.

Extending as our country does through so many degrees of latitude, a wide variation of rules may be made to adapt them to different localities, and as the pansy so readily accommodates itself in many ways to the wants of its admirers there is perhaps no flower grown from seeds which may be successfully planted at so many different seasons. It is well then to consider

WHEN TO SOW PANSY SEEDS.

From southern Illinois northward, if but one sowing is made, most satisfaction may be derived from planting out of doors early in spring. These plants will bloom from midsummer until snow flies, and if properly cared for, give the earliest flowers in spring and an abundance of bloom until summer heat has drawn the branches out so long that they had better give way to younger plants.

South of the latitude above mentioned, it is better to depend on spring flowers from plants started in late summer and early fall, or from seeds planted in the

greenhouse or house in January.

Pansies commence to flower in from seventy to eighty days from the time of sowing, under reasonably favorable conditions, and my customers in the extreme south and on the Pacific coast, will thus see that with fall sowing they may have

a long period of flowering before summer heat commences.

In the latitude of northern Illinois and Wisconsin, seeds for plants to winter over should not be planted later than first of September. If plants are desired for winter blooming, sow late in July. Flowers can be had nearly as early from plants started in the greenhouse from middle of January to middle of February, but in the house it would be better not to plant earlier than March, for it is necessary to give the young plants room as they grow, planting out in shallow boxes before they become drawn and slender. If seeds are sown out of doors just before winter sets in, they will come up early in spring and be in flower before July. If these indoor plants are too early for planting out of doors they must be given more room as they grow, and will do better in shallow boxes holding a number of plants, than if grown in pots. In the greenhouse we plant in the benches as if they were long boxes.

SOWING SEEDS.

The same care is required in sowing pansies as for other small seeds. They must not be covered too deeply, nor be permitted to dry after they have commenced to germinate, for a dried plant is dead no matter how small it is.

Pansy seed should be sown thinly in shallow furrows not more than one-sixteenth of an inch deep, made with the sharpened edge of a piece of lath. The seed bed should be mellow and rich, leveled smooth before the seeds are sown, and after sowing the seeds should be covered evenly, and the surface pressed with a piece of board. The seed bed should be watered and shaded until the young plants are up, after which they should be gradually accustomed to full light. Shade for the seed bed may be secured by laying over some kind of frame about a foot from the ground, laths or pieces of sheeting

As soon as the plants are up the shading must be gradually removed as there is always danger of "damping off" with any kind of small plants in close, warm and damp situations. Too high temperature in the seed bed is fatal to pansy seeds, and those planted in midsummer will not germinate strongly if the

thermometer in the shade ranges for a long time above 75 degrees. If the seeds are permitted to dry after they have sprouted, their vitality is gone. If covered

too deeply they cannot come up.

Florists are in the habit of sowing pansy seed under glass which is not necessary, but will answer very well early in spring, but shading with cloth-covered frame is far better in summer, and those who have followed our advice with their August sowing have had much better success than when using hot-bed sash.

WHERE TO GROW PANSIES.

In the house or greenhouse in winter, if young plants are had just commencing to flower late in the fall, if they are not kept too hot and dry and are protected from green fly and red spider. Old plants which have done service in the garden are not suitable for winter blooming. Several plants in a box are better than if grown in earthen pots. On the balcony, porch or window sill in summer, if not directly facing the south. Grown in this way no plant better repays the care given. In the garden anywhere, if not in too hot a place, directly facing the south; nor where they must struggle with larger plants and trees for nourishment.

GENERAL MANAGEMENT.

The plants which have flowered in the spring will do well again in the fall if

the long branches are cut back late in June.

The ability of the pansy to stand hot weather depends greatly on its treatment. If the soil is rich enough, and not too dry, nor in too hot a situation, pansies, with frequent cultivation, will stand a long siege of hot weather, if no seeds are allowed to form. With this care, one can have pansies from young plants in midsummer. A rich, sandy loam is best for pansies, and if not too stiff, a clay soil is better than that which is very sandy. But whatever its texture, the soil should be made rich with well-rotted manure, thoroughly incorporated with the soil, and stirred several times while the plants are in the seed bed. This thorough preparation of the soil before transplanting is very important.

Well-rotted manure, if to be had, is preferable to commercial fertilizers, and many who think they can not have a supply, might provide some by making a compost heap as if for a hot-bed, a heap of manure covered with soil only being necessary. After heating and watering for some time the whole mass, including the soil, should be mixed and piled again, any supply of hen manure on hand being included. In this way a good supply may be provided without the

offensiveness of the ordinary manure heap.

Transplant after the plants have attained the fourth or fifth leaf and before they have become drawn and slender with crowding. An eastern or northern slope is preferable. My own experience does not permit me to favor shade, although shade is preferable to too much heat, and shade of trees is more objectionable than shade of buildings. Temporary shade during the hottest portion of the day in extremely warm weather would be an advantage, but shade the whole season through will not admit the brightest colors, or an abundance of flowers.

If watering is necessary and possible the ground should be well soaked in the evening and thoroughly stirred, about two inches deep, next morning, as soon as the soil is dry enough.

Cultivation without watering, is better than watering without cultivation.

Keep the buds picked off after transplanting until the plants are well established, and also during very hot weather, for a good display of flowers in the fall.

When growing where they are to stay, about eight inches to a foot square of space should be allowed each plant. Frequent stirring of the soil is necessary between the plants until they are too large.

A crust should never be permitted to form on the surface. Frequent cultiva-

tion is, more than anything else, the secret of success in pansy growing.

WINTER PROTECTION.

The plants which have flowered through the summer and fall will usually winter over well if protected with a light covering of leaves or straw which is

better if a little brush has been placed over the plants first.

Young plants are quite hardy if protected from sharp winds, and not allowed to become too wet near the surface of the ground. In cold frames a considerable mixture of sand is desirable, as the plants, with protection, winter better in sandy than in clay soil. The young plants should be transplanted from the seed-bed to winter quarters early enough to become well rooted before winter sets in.

Boards may be used instead of glass for cold frame covering; glass should be shaded if too warm, as it is desirable to keep the plants dormant, and they should be watered, if necessary, as the roots will sometimes freeze dry if not

looked after.

A good way to protect pansy and other plants is to have a V trough of narrow boards to cover the plants with, and then throw on some coarse litter of leaves, straw, manure or shavings. In all cases thorough surface drainage must be provided to prevent water from accumulating about the plants and forming ice about them.

PANSY PESTS.

Pansies, like many other flower plants, in hot, dry weather, are liable to be injured by the so-called "Red Spider," a minute insect which attacks the under surface of the leaves of many garden and field plants, causing them to wither, as if from dryness. Spraying of water from a garden pump directed forcibly against the plants will reach the under side of the leaves and destroy the insects. The addition of pyrethrum powder, or else kerosene emulsion to the water makes the remedy still more effective.

As the red spider flourishes best in a dry atmosphere, it is often the case that plants in the shade of trees suffer because heavy dews are kept from the plants by the trees. Aphis or plant lice cause more injury in gardens than people are generally aware of. A drenching of weak tobacco tea will remove them.

During close, hot, moist weather, quite large plants will "damp off;" but I

do not know of a remedy.

VARIETIES AND PRICES.

The following list includes all of the leading varieties. Several kinds which I have not in sufficient quantity to offer separately are included in Extra Choice and Selected Mixed. My endeavor is to offer at a low price as good seeds as can be bought elsewhere at any price.

I would be pleased to have my customers grow my pansies by the side of the

more expensive seeds, with high sounding names, from other dealers.

Fancy names of mixtures, with glowing descriptions, are no doubt attractive to buyers, but it is thought that the following classification will facilitate selections of varieties to suit various tastes. It is well understood that there is always some variation of colors in the different varieties, no matter how choice the strain of seeds, but even those which vary are equally beautiful with the others, and it is from these that new varieties are produced. Even on the same plants the colors and markings vary with the weather, edgings and markings of lighter shades, which are quite narrow in the fall or spring, are broader in hot, dry weather, so that the flowers which commence in midsummer do not show the beauty and depth of coloring which the same varieties will attain in the later season.

We are continually making additions to our pansies in variety of shades and markings, and while for convenience of classification the old variety names are retained, yet each year we have new surprises in beautiful combination of

colors.

No.		PRICE,
I	Deep Blue-varying from bright to very dark blue	\$0.10
2	Blue Black Shaded-black in center, changing outward to shades of	
	blue	10

Trade packages contain about 1,000 seeds; ½ ounce at ounce rates. For \$1 order packages to amount of \$1.20; for \$2 order packages to amount to \$2.50. Trade packages of mixed varieties only. The above discount applies to seeds in packages, but not to seeds by weight or trade packages.

The same discount for other seeds as for pansy seeds.

PANSY PLANTS.

My trade in pansy plants is now very extensive with both amateurs and dealers. Orders will be filled promptly as early as spring opens.

Plants sent to all parts of the country, whether by express or mail, have been

reported received in splendid order.

The plants when received, whether by express or mail, should be taken to the cellar, or some other cool place, and unpacked at once. The roots should then be sprinkled with water and covered with fresh soil, planting them out in the evening or early in the morning. The bed should have been prepared some time previously, the surface being stirred frequently. The plants, with watering and shading may then be safely planted even in dry weather.

Plants delivered at express office here well packed to go long distances.

In bud or blossom, from selected seed, 50 plants, \$1.00; 100 plants, \$1.75; 1,000 plants, \$15.00; 500 plants at 1,000 plant rates. Plants once transplanted, by mail, postpaid, 25 cents per dozen. Pansy plants for the south ready after September 1st, from seed bed or once transplanted, by mail, postpaid, 25 cents; \$1.60 per hundred. Larger plants by express in fall at same prices, not prepaid.

Not less than one dozen plants by mail. If less than \$1.00 worth of plants are ordered by express five cents must be added to remittance for basket.

The above prices are for mixed varieties, but if many plants of any one variety are ordered, ten per cent. will be added to the regular price of such plants.

There is an advantage in club orders if sent to one person, not only by lower rates for plants, but also through proportionately less express charges if all are consigned to one person.

In club orders each person's collection will be marked separately, and some extras sent to the person making up the order.

For list of other plants see end of catalogue.

Extra premium to those who wish it. On all orders for seeds or plants amounting to five dollars or upwards the *Wisconsin Horticulturist* if this offer is mentioned with the order.

Other Flower Seeds.

SOME DIRECTIONS FOR CULTURE.

Nearly all flowering plants bear transplanting, thus giving opportunity to care for starting seeds much better than can be done in the open garden. A bed three feet eight inches wide and any length desired, should be made and enclosed with a six inch board on the south side, and one twelve inches wide at the back or north side.

Cover with square frames of lath four feet long and three feet wide, to which are tacked pieces of a light quality of unbleached sheeting. Under the shade of these covers we can secure the right degree of moisture to insure germination and after plants are up they can be gradually accustomed to full sunshine, but be very careful about removing covers when the air is very drying. Very small seeds may be started in boxes covered with panes of glass, and all then placed under the covers.

ASTERS.

The same directions given for care of pansies in seed bed will apply to asters, except that the latter may be covered a little deeper. Seeds may be sown from the time frost leaves the ground until late in May. Plants started in May will be ready for the fall fairs. Make the soil into which they are transplanted rich, stir the surface frequently and mulch before they begin to bud.

Asters, when in bloom, should not suffer for want of water. They are fine, grown in pots for decorative purposes. When the plants are in full bloom out of doors they may be lifted with some soil about the roots and placed in a bowl or tumbler of water with a little moss in the bottom. They will thus keep in condition longer if removed to the house for decoration than they would if exposed to the weather in the garden.

With so much need for white flowers none are more useful than white asters. These, with the lighter shades of purple, blue and rose or pink, are very much used for decorative work. A choice selection of these colors, in the best varieties has been chosen for customers.

101 104	Porcupine or needle	\$0.10
	a long time	10
105	Pæonia Flowered Perfection. Flowers large, globular, free bloom-	
_	ing, and in great variety of shades	IO

PETUNIA HYBRIDA, GRANDIFLORA.

This class of flowers is so well known that they need no special description. Seeds should be sown in boxes sprinkled on the surface of the soil and pressed They should be carefully watered and shaded with a pane of glass, muslin or paper, or they may be covered with a woolen cloth laid directly on them, the watering being allowed to soak through the covering. As soon as the seeds have sprouted remove the cloth, but do not let the plants dry out or keep them so close as to cause damping off. The fringed petunias are very attractive and are admired even by those who have not cared for petunias until seeing these beautiful varieties. Some flowers of the Superbissima class were five inches across in various colors, with black, white and yellow throats and frilled edges.

Petunias are splendid house plants for either winter or summer blooming and if cut back occasionally will continue to grow and flower for several years, but

it is easy to renew the single varieties from seed.

2 4 I	Fringed Alba, white \$0.15	
242	Fringed Maculata, or spotted	
244	Fringed Kermesina, rich crimson maroon	,

252	Superbissima, many varieties mixed	,
253	Fringed and Superbissima mixed	

PHLOX DRUMMONDII.

One of the most showy and free blooming annuals. Seeds may be sown early with about the same care as for Asters, but like Petunias, the soil need not be so rich.

The Grandiflora varieties are strong growing with large flowers. The Hortensifloras are compact, bushy growers, with flowers larger than the common varieties.

270	Fringed. These have fringed edges, mixed colors)
271	Star and Fringed, mixed)

RESEDA ODORATA, OR MIGNONETTE.

For fragrance and free blooming qualities the three following varieties are offered as the best:

272	Parson's white	\$	0.05
	Miles Spiral, long spikes		
274	Matchet, dense compact growth		10
275	Mixed varieties	•••••	05

STOCKS.

For fragrance and beauty combined, the ten-week stocks are much esteemed. They should be started early in window or hot bed, but they will bloom in good season if sown as recommended for pansies. A light, rich soil suits them best. Stocks, Alyssum and other plants belonging to the cabbage family suffer from attacks of the flea beetle. The plants should be dusted with a mixture of one part pyrethrum powder to forty parts land plaster. Coal ashes or dry road dust may be substituted for plaster. The California grown pyrethrum called Buhach is the best.

276	Large flowered tall, ten weeks, mixed	\$0,10
277	Large flowered, dwarf, pyramidal, ten weeks, mixed	10
278	Perpetual flowering, white	10

VERBENA HYBRIDA.

Seedling Verbenas are more free blooming and fragrant than those from cuttings, and if seeds are sown in the house, may be had in bloom as early as desirable for our season. They come reasonably true to color from seeds.

284	Mammoth mixed		\$0.10
		mixed colors, with white eye	10
290	Candidissima, pure white		10
291	Defiance, brilliant scarlet		10
292	Deep Blue, with white eye		10
293	Scarlet, with white eye		10
		FLOWER.	

Miniature Sunflower. Helianthus Cucumerifolus quite distinct from all other varieties of annual sunflowers. Plants about three feet high and as many broad, covered all the season with small flowers

POPPY.

Sow early, cover lightly and do not let the seeds dry out. Poppies do not transplant as well as some other plants, and do well sown where they are to stay, thinning to six or eight inches apart.

310	Ranunculus flowered, mixed	\$0.05
311	Pæonia flowered, mixed	05
T	he same premium allowed on other seeds as for pansy seeds.	

Plant Department.

The selection of varieties for our plant list has been made with reference to their fitness for out-door growing, window boxes in summer, veranda boxes, and vases without regard to their usefulness as winter houseplants also. We find that many things which formerly were classed only as greenhouse plants are fine for summer growth, either outside of the window, in the garden, or as climbers by the porch. For a summer climber there is nothing finer than Cobea Scandens.

SEEDLING PLANTS IN VARIETY.

In this department we seem to supply a long felt want, and have been surprised at the great demand for seedling plants for bedding purposes. Many do not care to trouble with seed sowing, others order a few to fill vacancies, or of such varieties as they cannot start early.

These plants are all much earlier than can be started out of doors. We have increased our facilities for growing and hardening off the plants, and our large

mail and express trade is steadily increasing.

Seedling Verbenas are healthier, more fragrant and free blooming than those from cuttings. Prices as follows:

Asters, in white, pink, light blue, bright red, deep purple,		
arate or in any variety in mixture as listed among		40 **
Ageratum dwarf, Alyssum Candytuft, white or mixed		
mondii, Japan Pink, Snap Dragon, Parsley—f

English Daisies, white or pink, per doz		25
Marguerite Carnations. This new class of carnations h		,
satisfactory, blooming as they do the first season		
are more thrifty and free than the old style florists	carnations and	
equally fragrant. A large percentage come doub	ole and some of	
the most choice can be potted for blooming in the	e house, per doz.	
Cosmos. We omitted this because blooming so late no n		
started, but so many people order it we list it ag	gain, per doz	30

Plants from Cuttings.

These are necessarily dearer than plants from seed because much room is taken up in the greenhouse with stock plants of the varieties to be propagated, but if we would be sure of varieties many kinds must be increased in this way.

but if we would be but of various many hinds must be increased if	in cars way.		
Eac	ch. Doz.		
Double Alyssum, fine for window boxes, vases, etc., always in			
bloom and fine for cutting 50	50c.		
Double Alyssum, new giant. This is a stronger grower than the	. 5-0.		
preceding and better for cutting purposes; both are grace-			
ful drooping plants			
Feverfew, double white 50	c. 50c.		
Forget-Me-Not, Heavenly blue; perfectly hardy in winter but			
easily lost in summer if neglected 50	c. 50c.		
Pineapple Salvia—Salvia rutilans. The leaves of this salvia			
have a strong pineapple fragrance. Plants may be grown			
in pots, or potted in late summer for winter blooming.			
The long spikes of crimson flowers are very showy 5c	50c.		
Festuca Glauca, blue fescue. This pretty grass is fine for edg-			
ings in gardens, window boxes, or vases 50	c. 50c.		
Paris Daisy—White with yellow center, a new large flowered			
variety more free blooming than the old kind 50	500.		
Petunia Double-Snow Drift, white; Pink Beauty, lovely pink; Au			
son; Argus, crimson and white; Elfreda, carmine, rose and white, Ioc. each; 3			
for 25c.	Loo. cach, 5		
101 256.			

Heliotrope—We have tested many varieties the past season and find some of the older varieties the most free bloomers, but some of the new kinds have special qualities to recommend them. Some kinds are different only in name, so were rejected. We offer the following as the best: Queen of Violets, very dark with white eye; Florence Nightingale and Jersey Beauty, medium shade and very free bloomers; White Lady, nearest approach to white, good grower, free bloomer; Albert Deleaux, variegated foliage, medium color of flowers; Picciola, tall strong grower with good sized trusses of flowers, more nearly red

than any other variety, Ioc. each; 3 for 25c.

Geranium, Rose Scented are fine for summer use if grown in the garden, and like Heliotrope should be in every outdoor collection. Either skeleton leaved or common; 10c. each; three for 25c.

Lemon-scented, rare and delightfully fragrant, Ioc. each; three for 25c. Lemon Verbena—Aloysa citriodora, a general favorite easily grown; 10c. each;

three for 25c

Mexican Primrose. These plants bloom profusely in the summer and are

fine for window boxes or in the garden; 5c. each; doz. 5oc. Solanum Jasminoides. A beautiful summer climber for the porch or in win-

dow boxes; 10c. each; three for 25c.

Cuphea Platycentia—Cigar Flower. Always in bloom winter or summer and pretty in a window box collection; 5c. each; doz. 5oc.

Poet's Ivy. This form of English ivy has smaller leaves than the common

variety and is very pretty and graceful; 10c. each; three for 25c.

Hanging Basket Fern—Nephrolepis Exaltata. We have had wonderful success with this fern grown in a hanging basket built of sticks, log cabin fashion, and lined with sphagnum moss or any thing to keep the soil from sifting through. Young plants from the old one grow through the sides, and the fronds three to four feet long on large plants are always admired. Leaf mould, with a little

well rotted manure, suits them best. Our common white cedar fence posts are

easily cut and split into suitable pieces for building plant baskets.

Ours is the drooping variety with long, arching, drooping fronds. Some eastern growers are calling this the "Boston Fern." Plants, 15c. each; small plants, 10c; large plants, 20c.

Umbrella Plant—Cyperus Alternifolius. These favorite plants are easily grown in pots, as aquatics, or in the garden; they like plenty of moisture; thrifty

young plants 5c. each; larger plants 10c.

Latanas are very free bloomers all summer and give a combination of shades different from any other varieties, Javoli pure white, Rigolette shading to deep rose; Jacques Minot, yellow shading to bright orange; Francine, rosy lilac dwarf; A.Claveau, soft yellow shading to rose dwarf; Amiel, reddish orange and yellow dwarf; 10c. each; six for 50c.

Strawberry Geranium—Saxifraga sarmentosa—easily grown and a beautiful

basket plant; 5c. each; six for 25c.

Geraniums—Our local trade requires Geraniums in considerable quantity and variety. Outside customers often call for them so we catalogue them this season. We have in stock thirty-two of the best varieties, mostly double, including the following:

Double Whites Bride Bouquet, Alpine Beauty, Ayne Chevalier, La Favorite, Bruant, bright scarlet; Mabel, brilliant dark scarlet; John Doyle, bright vermilion; S. A. Nutt and Leonard Kelway, very dark vermilion; Professor

Poirlant, crimson, purple and scarlet.

Of pinks, Salmon's flesh color, apple bloom, etc., we have Beauty of Poitrine, Queen of Fairies, M. Jovis, Madam Dubouche, Madam Gilbert, M. Cara, Pocahontas and others. Also choice single varieties. 10c. each; 3 for 25c; 13 for \$1.00.

HARDY PERENNIALS.

Achilea Ptarmica—These plants are extremely hardy and very free blooming, having finely-divided, dark green leaves and covered with pretty double, pure white flowers.

Achilea-The Pearl.-Eighteen inches high. 10c. each, three for 25c.

Helianthus Multiflora—Double perennial sunflower—as beautiful as double dahlias, more free to bloom and more easily cared for. The roots are not always hardy in winter, but a clump of roots may be kept in a box in the cellar through the winter, and if not very wet or dust dry, will keep as easily as potatoes. After they start growing in spring divide the roots, and every sprout will make large blooming plants the same season; 10c. each, three for 25c.

GLADIOLUS BULBS.

We have a fine collection of gladiolus in splendid mixture of shades. Per 12, 40c.; per 35, \$1.00. Postage paid. By express 30c. per doz. 45 for \$1.00.

GENERAL REMARKS.

Read what is said about care of pansy plants when received by mail or ex-

press. The same remarks apply to other plants also.

Express rates on plants are now so reasonable it is much better to have plants come that way than by mail. Larger plants can be sent by express easier than by mail and we can afford to be more generous with extras on express orders. We do not fill plant orders of less than 25c. by mail, or less than \$1.00 by express. A dozen may consist of more than one kind of plant at same price. In club orders each one's lot is marked separate and liberal extras given to the one making up the club.

Of miscellaneous plants at dozen rates, select for each dollar to value \$1.10;

of 10c. plants, select 13 for \$1.00 or 28 for \$2.00.

We warrant to fill all orders received. If seeds or plants fail to reach you in due season, let us know at once. Money at our risk if you send express order, post office order or bank draft on Chicago, Milwaukee, St. Paul or Minneapolis banks, or any of the large cities. Please do not send your personal checks. Banks refuse them. Small amounts in silver have so far proved safe. Stamps if sent should not be of larger than two cent denomination, one cent stamps preferred. Letters containing bank bills should be registered. Express orders preferred. Make orders plain and separate from correspondence.

And don't forget to sign your name. Send all orders to
